Hey gang, I met with Greg O this morning regarding some of the proposals that were being offered by Jeff Landbehn (requesting just how many wells and how much money would be involved for the installation of a groundwater monitoring well system) , and Anthony Portone ( cover material when needed AND possible inert's (concrete) for the "lake" issue. ). We thought it would be a good idea to internally discuss the "lake" issue before things get rolling too fast . Concerns are: 1) sediments in the lake need to be tested as we have not characterized them (hazardous/non-hazardous), 2) EPA (A K A. Mike Mikulka) will (and does) have a major problem with "filling the lake" without dealing with the issues of "soil characterization" and water issues from activities of filling or draining . 3) Quick "fix" . fill in the lake with inerts that Anthony need to get rid of with long-term consequences of such an action ..Grand Cal's getting tested, dredged, disposed of properly, cleaned up ..should we (can we) follow that good example 4) EPA could slam us good 5) As always \$\$\$

Regarding Jeff Langbehn's request Greg should have number of wells and dollars by the end of the day . .

Regarding the Lake issue how about a conference call? I'm free basically all week I'll be the scheduler/logistics contact so let me know what you all think Thanks!
